Temperature Distribution Film

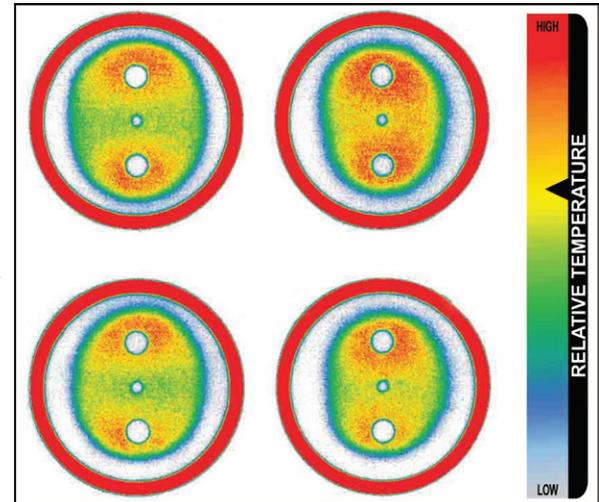

By Sensor Products

Monday, February 14, 2011

Sensor Products Inc (Madison, NJ) Thermex temperature distribution film can be used in virtually any application to test and monitor heated contacting surfaces from 200° to 300°F (93° to 149°C). Other features include:

- The ability to be used alone or in conjunction with Fuji Prescale pressure indicating film.
- The ability to change color instantaneously and permanently to reveal temperature distribution between any two contacting surfaces.
- The ability to reveal spot high or low temperature zones and minute surface variations.
- Uses in invasive intolerant environments and interfaces that aren't easily accessed with traditional temperature indicators and infrared thermometers

For more information visit www.sensorprod.com/thermex.

Thermex® temperature distribution paper enhanced by Topaq® Analysis

Sensor Products' Thermex temperature distribution film can change color instantaneously and permanently to reveal temperature distribution between any two contacting surfaces.
